PROFESSIONAL SUMMARY

Data Engineer with 7 years of experience building data pipelines, warehouses and analytics products across media, agribusiness and poultry supply chains in Africa. Designs dbt-powered dimensional models and Bronze, Silver and Gold warehouse layers in SQL and Python on Azure, integrating ERP, operational and spreadsheet sources from six African markets. Delivers the trusted datasets, Power BI semantic models and Streamlit applications that sales, finance, supply-chain and production teams rely on. Microsoft Certified: Fabric Data Engineer Associate.

CORE SKILLS

Languages	SQL (T-SQL), Python (pandas, NumPy, scikit-learn), DAX, R
Data engineering	dbt, ETL/ELT pipelines, medallion architecture (Bronze/Silver/Gold), dimensional modelling (fact & dimension tables), data validation & reconciliation, query and view optimisation, Git version control
Cloud & platforms	Microsoft Fabric, Azure SQL Database, Azure Synapse Analytics, Azure App Service, Azure DevOps
BI & applications	Power BI (semantic modelling, DAX), Streamlit, Tableau, Matplotlib, Seaborn
Analytics & ML	Exploratory data analysis, KPI design, regression, classification, clustering, time-series forecasting, NLP and LLM applications
Professional	Stakeholder management, translating business requirements into data solutions, technical documentation, data storytelling

PROFESSIONAL EXPERIENCE

Data Engineer II — Jul 2025 - Present
Hatch Africa, Addis Ababa, Ethiopia

- Design, develop and optimise scalable data pipelines and dbt-powered data models in SQL and Python, building reliable fact and dimension tables for enterprise reporting and analytics.
- Architect and maintain the Azure SQL data warehouse with structured Bronze, Silver and Gold layers, improving data quality, accessibility and performance.
- Develop ETL/ELT workflows integrating ERP systems, operational platforms, Google Sheets and other business applications, including spreadsheet ingestion with Azure Synapse Analytics notebooks.
- Build centralised, analytics-ready datasets that power dashboards and KPIs for Sales, Finance, Supply Chain and Production teams in Ethiopia, Rwanda, Uganda, Kenya, Ghana and Côte d'Ivoire.
- Consolidated sales-target KPIs from Power BI DAX into a single certified SQL KPI table, and am building an Azure API so the software engineering team can consume it directly.
- Built agent segmentation and lifetime-value / acquisition-cost (LTV/CAC) analysis in Power BI, classifying agents as one-time, seasonal or high-frequency customers.
- Developed three Streamlit applications (Agent NPS, L3 Recruitment, SR L3) on Azure SQL, deployed through Azure App Service and Azure DevOps; the NPS app includes an LLM-powered assistant for natural-language questions about the data.
- Implement validation and reconciliation across source systems, and optimise SQL queries, views and Power BI semantic models to cut processing time and improve refresh performance.
- Work with business stakeholders, BI developers and software engineers to turn requirements into scalable data solutions, backed by version-controlled code and documentation.

Data Engineer I

Apr 2024 - Jun 2025

EthioChicken, Addis Ababa, Ethiopia (Hybrid)

- Developed and maintained SQL-based transformation processes to integrate, clean and structure data from multiple operational and business systems.
- Designed and maintained ETL workflows in SQL and Python, automating data preparation and improving reporting efficiency.
- Built analytical datasets, database views and Power BI reporting models behind KPI dashboards for Finance, Logistics, Procurement, Sales and Production.
- Built a vaccine analytics suite tracking inventory, distribution and usage end to end, improving visibility across the supply chain.
- Performed data validation and reconciliation to identify inconsistencies and ensure accuracy across reporting systems.
- Partnered with stakeholders to automate recurring reports, streamline reporting processes and improve access to actionable insights.

Analytics Engineer

Aug 2019 - May 2024

MultiChoice Group, Addis Ababa, Ethiopia

- Designed analytical datasets by extracting, transforming and organising data from multiple business sources using SQL and Python.
- Built data models and structured reporting datasets to support business intelligence and management reporting.
- Developed and maintained automated reporting covering daily, weekly, monthly, quarterly and annual business performance.
- Performed exploratory data analysis to identify sales trends, performance gaps and opportunities for operational improvement.
- Translated complex data into actionable insights and interactive visualisations, working with cross-functional teams on requirements and data quality.

SELECTED PROJECTS

- **Telegram data product, raw data to analytical API** (dbt, Dagster, YOLOv8, Docker): end-to-end pipeline with orchestration, image enrichment and an API serving layer.
- **Credit risk probability model** (Python, scikit-learn): proxy default target and interpretable scoring designed around Basel II requirements.
- **Fraud detection for e-commerce and bank transactions** (Python, scikit-learn): models tuned to the distinct challenges of each transaction type.
- **RAG chatbot for financial-services complaints** (Python, LLMs): retrieval-augmented assistant turning customer feedback into actionable insight.

LICENSES & CERTIFICATIONS

Microsoft Certified: Fabric Data Engineer Associate, Microsoft (Credential ID 6F95A05364949B51)	Sep 2026
Associate Data Engineer, DataCamp	Mar 2026
Kifiya AI Mastery Training Program, 10 Academy	Jun 2025
Advanced SQL for Data Engineering, 365 Data Science	Nov 2024
AI Career Essentials, ALX Ethiopia	May 2024

EDUCATION

BSc, Electrical and Computer Engineering, Jimma University, Jimma, Ethiopia
